

EMAIL SECURITY & ARCHIVING

What is Email security and archiving?

- The service is the only South African hosted cloud-based archiving service that is wholly within the borders of South Africa.
- This is important in terms of pending POPI legislation as well as meeting with other governance criteria.
- All data remains the property of the client and is accessible via the Cloud or locally. Data export and import is available at a minimal cost to the client.
- Other providers' pricing structures make data export / import a very expensive or cost prohibitive exercise.
- Provides end-to-end security, which includes Anti-Spam, Anti-Virus, E-mail content filtering, E-mail management, archiving and business continuity/disaster recovery.

Product Overview

Pixel Perfect Security protects your business against:

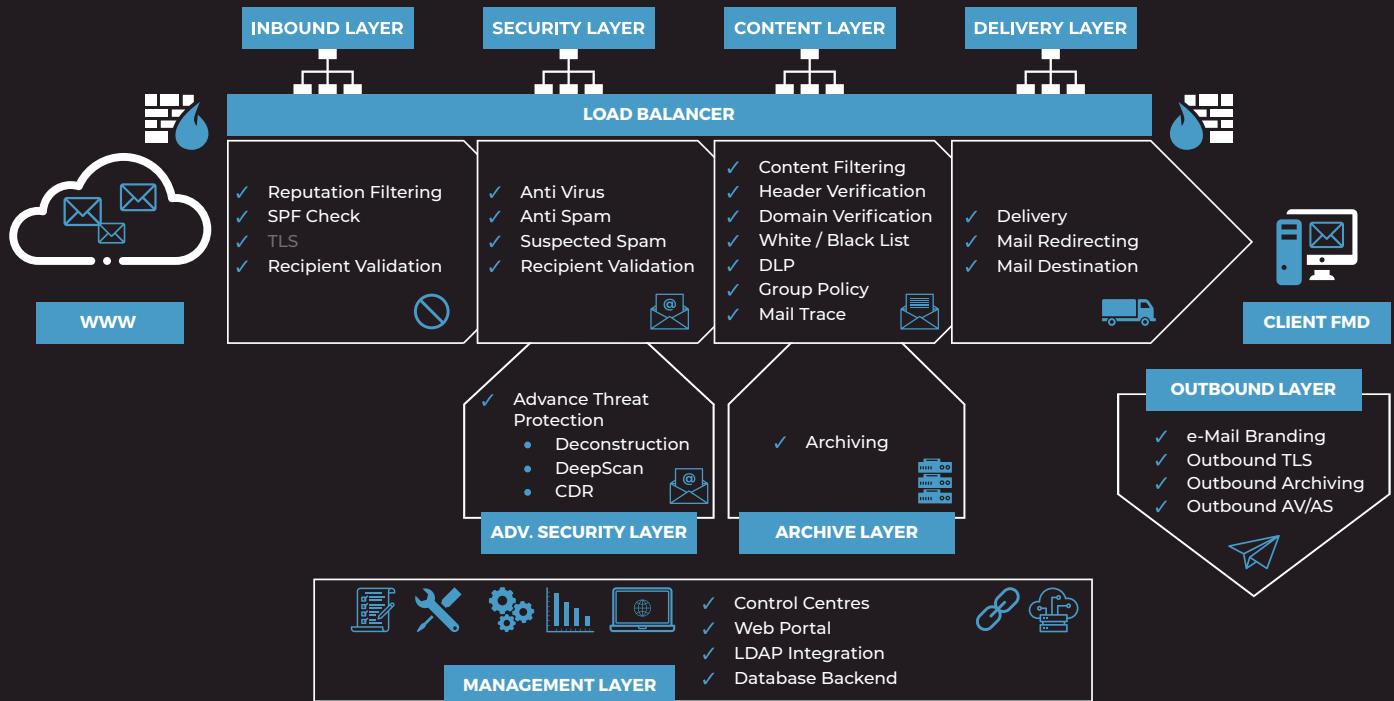

- E-mail security threats such as SPAM, viruses and other malicious content
- The circulation of inappropriate material
- E-mail abuse by employees (Enterprise version only)
- Bandwidth wastage
- Network congestion
- Contravention of your corporate e-mail usage policy by employees
- Legal liability arising from breaches of confidentiality (Enterprise version only)

Pixel Perfect Archiving is a simple and reliable email archiving and retrieval solution.

- Reliable, real-time backup of electronic communications
- Business continuity in the event of an E-mail system failure
- A central archive of incoming, outgoing and internal electronic messages
- Simple E-mail sorting, searching and retrieval capabilities
- Viewing and replaying of lost or deleted messages
- Easy access to E-mail messages at all times using any web-enabled device
- Ability to send and receive messages from within the archive platform
- Compliance with the requirements of the South African Electronic Communications and Transactions (ECT) Act and various other pieces of legislation that indirectly prescribe the retention or archiving of electronic communication.
